Education

MNS-UET Multan <i>B.Sc. in Computer Science</i>	2019 - 2023
Punjab Group of Colleges, Multan <i>F.Sc. in Pre-Engineering</i>	2017 - 2019

Research

Systematic Approach to Analyze IoT-23 for Malware Detection <i>Final Year Research Project</i>	Nov 2023
- Designed a machine learning pipeline to detect malware in IoT network traffic using the IoT-23 dataset. - Presented findings at the IEEE International Conference on Emerging Technologies (ICET), Nov 2023. DOI: 10.1109/ICET59753.2023.10374768	

Experience

Full Stack Software Engineer <i>Xtra App Studios</i>	Aug 2025 - Jul 2026
- Built LLM-powered features, including a retrieval-augmented generation (RAG) pipeline, text processing, and automated data summarization via external AI APIs. - Designed backend systems and databases (CRUD, indexing, query optimization), improving data retrieval efficiency by ~25%. - Built RESTful APIs with authentication and rate limiting, reducing unauthorized access risk. - Implemented structured logging, monitoring, and secure coding practices to improve system resilience and anomaly detection.	
Software Engineer <i>Shujabad Weaving Mills</i>	Sept 2023 - Aug 2025
- Built database-driven applications to digitize factory operations, cutting manual processing time by 40-60%. - Optimized SQL queries and database structures, improving performance and reducing system latency. - Implemented role-based access control (RBAC) and automated reporting for operational data monitoring. - Mapped manual workflows into digital systems and resolved production issues to maintain high system availability.	
Internship <i>MNS-UET Multan</i>	Jan 2020 - Dec 2020
- Led a 5-member team to upgrade a legacy e-challan system, cutting manual workload by ~50%. - Managed IT infrastructure operations, including network administration, server maintenance, and system security for university systems.	

Skills

Engineering: Backend Development, Full-Stack Development, RESTful APIs, System Architecture, Distributed Systems

AI & LLM Integration: LLM Integration, Retrieval-Augmented Generation (RAG), External AI APIs, Automated Data Summarization

Databases: SQL, Database Design, Query Optimization, CRUD Operations, Indexing

Security & Ops: Role-Based Access Control (RBAC), Rate Limiting, Threat Mitigation, Network Administration, Server Management
